OPERATING INSTRUCTIONS

Crown at 3 o'clock

WINDING THE WATCH

Position I'

Turn the crown clockwise to wind the watch. When the movement is fully wound (about 65 turns of the crown), a power reserve of 42 hours is granted. The automatic movement allows the watch to wind up by simply using the energy produced by the wearer's own movement. If the watch stops, you need to wind it manually by turning the crown.

SETTING THE TIME

Position I''

Pull out the crown in position I''. Hours hand (A) and minutes hand (B) rotate both clockwise and anticlockwise to set the desired time. Push in the crown in position I' at the end of the operation to protect the movement against dust and humidity.

Seconds hand (C) requires no adjustment.

Crown at 9 o'clock

This crown is not operational but purely aesthetic and part of the design elements of all CYRUS timepieces.

Finally, we recommend you have your watch controlled and serviced through an official representative of the CYRUS brand every 3 years and you will enjoy your watch for lifetime.
